Gateway to Memory: An Introduction to Neural Network Modeling of the Hippocampus and Learning (Hardback)

By Mark A. Gluck, Catherine E. Myers

MIT Press Ltd, United States, 2001. Hardcover. Book Condition: New. New. 236 x 187 mm. Language: English. Brand New Book. This book is for students and researchers who have a specific interest in learning and memory and want to understand how computational models can be integrated into experimental research on the hippocampus and learning. It emphasizes the function of brain structures as they give rise to behavior, rather than the molecular or neuronal details. It also emphasizes the process of modeling, rather than the mathematical details of the models themselves. The book is divided into two parts. The first part provides a tutorial introduction to topics in neuroscience, the psychology of learning and memory, and the theory of neural network models. The second part, the core of the book, reviews computational models of how the hippocampus cooperates with other brain structures -- including the entorhinal cortex, basal forebrain, cerebellum, and primary sensory and motor cortices -- to support learning and memory in both animals and humans. The book assumes no prior knowledge of computational modeling or mathematics. For those who wish to delve more deeply into the formal details of the models, there are optional mathboxes and appendices. The...

Reviews

It is an awesome pdf i have possibly go through. It really is filled with wisdom and knowledge You will not really feel monotony at whenever you want of your time (that's what catalogues are for relating to in the event you ask me).
-- Horace Schroeder

This book will not be straightforward to start on studying but really fun to read. It absolutely was written really flawlessly and helpful. You can expect to like just how the writer write this publication.
-- Glenna Goldner
